

Wifi for employees and students

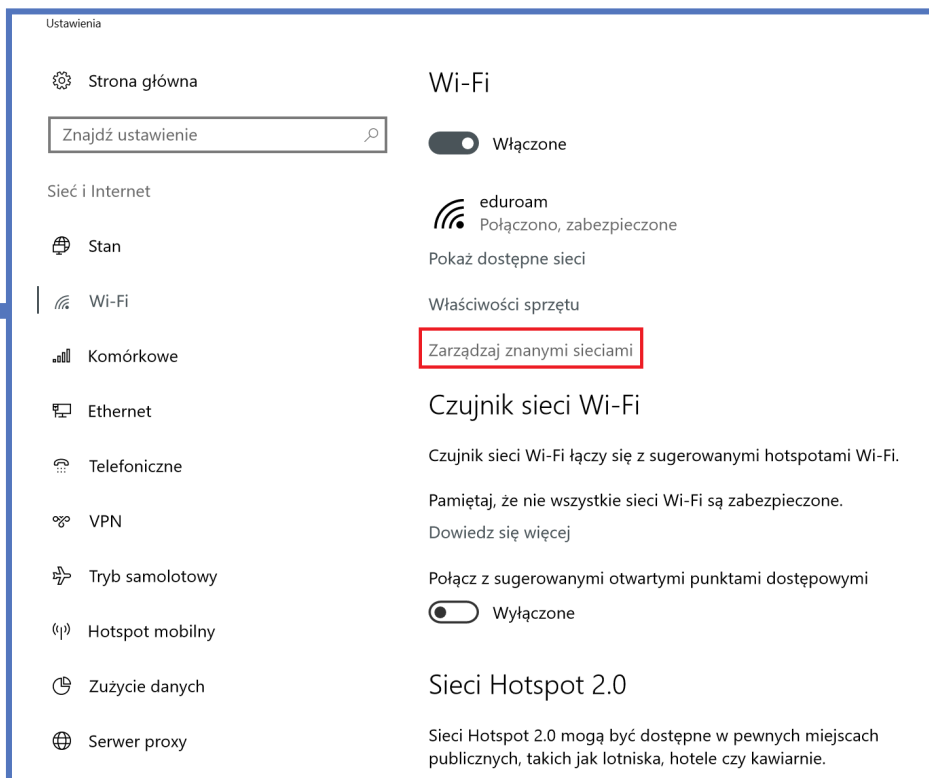

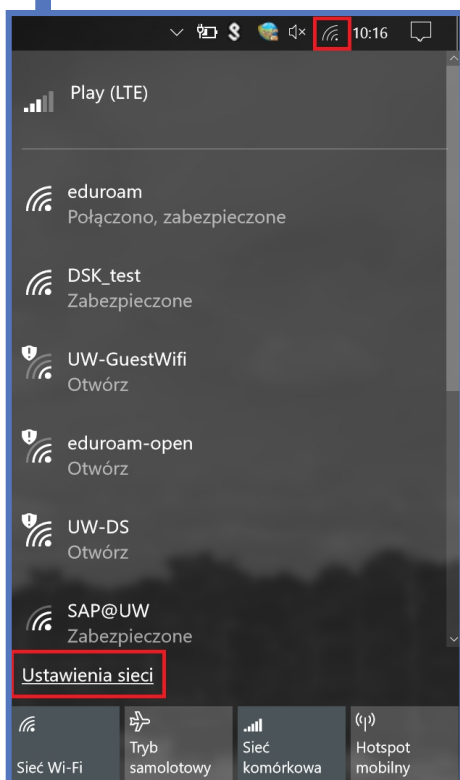

Removing eduroam profile – Windows 8/10

Eduroam (Edu-cation roam-ing) is a world-wide project to provide wireless access to students, researchers and university staff. These users have wireless internet access in all participating organisations, without the need to reconfigure their devices.

Step by step guide

1. Click on the network icon in the taskbar
2. In the newly opened list, select the “Network settings”

3. In the network management panel, select the “Manage known networks” tab

4. Search and select the eduroam network profile
5. Click the “Forget” button
